PROFESSIONAL EXPERIENCE

- Overall responsibility for Kansas City Regional office operations
- Storm water and wastewater regulatory compliance and systems design
- Environmental compliance training program development
- SPCC Plan development and compliance
- Emergency response management
- Hazardous/non-hazardous waste management
- Design, management, and maintenance of environmental management / tracking computer databases

KEY PROJECTS

Storm Water/Wastewater Compliance Program Management

- Coordinates storm water/wastewater compliance programs for multiple rail carriers at sites across the U.S., which includes: determination of surface water flow and outfalls, conducting site inspections, collection of storm water samples, completion and submittal of storm water permit applications, generation of Storm Water Pollution Prevention Plans and Best Management Practices Plans, conveyance systems design and installation, and pollution prevention systems design
- Acts as the primary liaison between the client and numerous local, state, and federal regulatory agencies

SPCC Plan and FRP Development

- Manages SPCC Plan and FRP generation and implementation for several of EWI's transportation and manufacturing clients
- Responsibilities include providing regulatory and technical assistance and document generation
- Develops and conducts training and inspection programs associated with the plans

Emergency Spill Response

- Manages emergency spill response activities for various clients, including multiple rail carriers, petroleum distributors, and interstate trucking companies; Spills may include petroleum products, hazardous materials, hazardous waste, and non-hazardous waste
- Response activities include immediate containment of the spill, protection of human health and environment, coordination with regulatory agencies, and final cleanup of the affected site
